Building Systems That Build Companies

Conveyors

- Idler / Powered / Accumulation Roller Conveyors
- Telescopic / Flexible Roller Conveyors
- Inclined / Floor to Floor Belt Conveyors
- Telescopic Belt Conveyors
- Side Walled Cleated Belt Conveyors
- Chain / Slat Chain & Gripper Conveyors
- 90° Bend Belt / Roller / Slat Chain Conveyors
- Modular Conveyors
- Wire Mesh Conveyors
- Continuous Vertical Elevators / Lowerators
- Multi-Discharge Product Elevators

Conveying your Ideas

Conveyor Systems

Beverage Bottling Line Systems

POY Bobbin Handling Systems

Auto & Industrial Battery Assembly / Charging / Finishing Systems

Naked / Packed Confectionery Handling Systems

Cooling Chambers & Systems for Candies / Confectionery

Paper Reel Handling Systems

Carton / Sacks / Bags Handling Systems

Product Distribution, Sorting & End of Line Systems

Pallet Handling Systems

Warehouse Application Systems

Software Integration for all the above lines

System Integration - Sum of Excellent Parts

- Case Packing
- Check Weighing / Online Weighing
- Labelling / Coding / Print & Apply
- Flap Closing & Sealing / Strapping
- Sorting & Collating
- Palletizing / Depalletizing

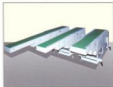

Truck & Container Loaders / Unloaders

Vega's Mobile Loader / Unloader / Telescopic conveyor is an efficient, fast and an economical solution for loading and unloading of packages into and from trucks / containers. Custom built belts ensure proper gripping of packages while loading or unloading them.

Vega's Telescopic Belt Conveyor being multi-stage, can ideally be used in loading bays, shipping areas where space is a constraint. It reaches to the end of the vehicle providing smooth uninterrupted flow from the beginning to the end of the truck / container.

The boom and the belt drive are controlled by simple push buttons and the boom can be extended or retracted. The belt can run in either direction making it useful for loading and unloading operations.

The expandable flexible conveyor carries the packages directly to the stacking point avoiding handling of packages. Castor wheels provide easy mobility.

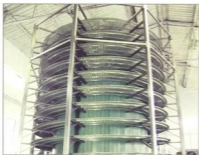

Vega's Mobile & Flexible Loader / Unloader with optimal Boom is suitable for applications where the horizontal boom of the conveyor is required to adjust in height.

Spiral Conveyors

Being one of the most modern and innovative designs, Spiral Conveyors allow you to take room in height and not in length. This method of conveying system is suitable both for packaged and unpackaged products.

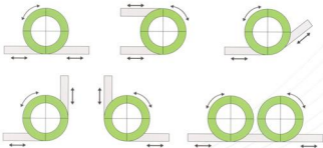

Vega's Spiral Conveyor is an unique method to dry, leaven, cool, freeze, accumulate different products. The spiral conveyor gives considerable advantages such as energy saving, space optimization, easy access for cleaning and hygiene maintenance, different shapes and sizes and speeds to match throughputs.

Vega's Spiral Conveyor systems are modular in design, come equipped with electronic speed control. These enable any amount of product to be carried to any distance, around bends, up ascent and down descent or in spiral paths.

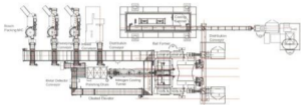

The conveyor belts can be from a minimum width of 200 mm to more than 1000 mm wide and can be of stainless steel or plastic. The input and the output to the Spiral Conveyor can be at varying angles and degrees as shown in the picture, below.

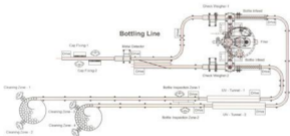

Improved processing efficiency, minimal floor space, low energy costs, stringent hygiene standards, wide range of operating temperatures, increased product carrying capacity all make the Spiral Conveyor a versatile and effective way of conveying.

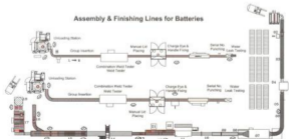

Confectionery Line

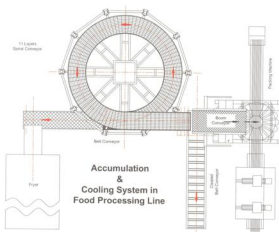

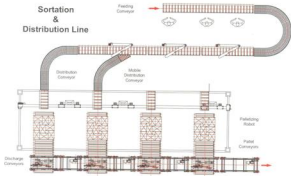

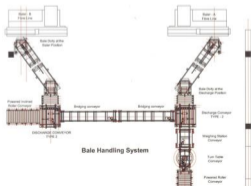

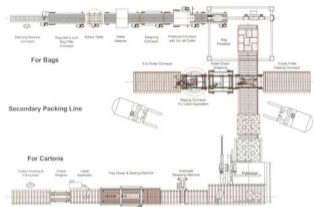

Bottling Line

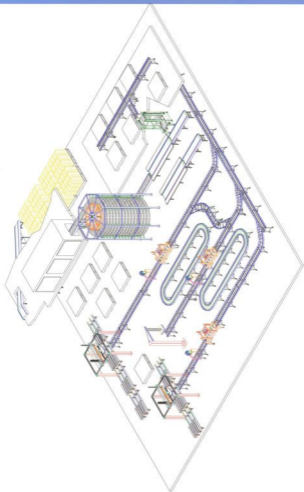

Assembly & Finishing Lines for Batteries

For over a decade, Vega has been leader in its own right, producing versatile, reliable and cost effective systems across industry segments. Vega's success in transiting from a single product company to a multi product company was due to the fact that it has always been in the vanguard of material handling technology offering technically proven, dependable and quality products from a single conveyor roller to a custom designed system for handling products as small as a match box to as large as a pallet load.

Vega's deep commitment towards achieving total customer satisfaction and its strong innovative skills has been the basis of the company's success in offering application specific solutions to customers. This fact has been testified by more than 150 of its customers, a majority of whom have been associated with the company since a long time.
